Subject: research for ethylene glycol and propylene glycol

Dear Shelby,

I support the NIH and DHHS on their efforts to control the use and release of toxic substances. Recently, I have had to review a great deal of information on the toxicity of substances found in our drinking water and am familiar with the research needed to acquire the best supporting evidence through studies and others to substantiate our concerns regarding these substances. During my search, I happened to visit your website:
Federal Register: March 5, 2002 (Vol. 67, No. 43)]
[Notices]
[Pages 9980 - 9981] DEPARTMENT OF HEALTH AND HUMAN SERVICES
Public Health Service
National Toxicology Program (NTP)
National Institute of Environmental Health Sciences (NIEHS)
The NTP Center for the Evaluation of Risks to Human Reproduction (CERHR) 1. Announces a Future Evaluation of Ethylene Glycol (CASRN: 107-21-1) and Propylene Glycol (CASRN: 57-55-6), 2. Requests Public Input on These Chemicals, and 3. Solicits the Nomination of Individuals Qualified to Serve on an Expert Panel.

I am currently employed with a health company, and if it is not in conflict with my position here or with the study, I could volunteer some hours to help with your efforts. My background is in writing, editing, research, and so forth. If at anytime your office needs additional support, please feel free to contact me, I would be glad to help.
